

MOSQUITO®

SCRATCHING THE ITCH

Ergonomically designed to give the best shooting experience, the Mosquito® is built on a tough polymer frame and features an accessory rail, rugged blowback system, fixed barrel and adjustable sights. Multiple safety features include a manual safety, firing pin safety, magazine safety and key operated integral lock. There are five Mosquito models available. The Mosquito Reverse Two-Tone has a stainless finish on the frame with a blued slide. The more traditional Mosquito Two-Tone has a stainless finish slide and black polymer frame. For the classic professional look, there's the basic Mosquito with a blued overall finish. The Mosquito with Threaded Barrel, which also has a blued finish, is designed to accept most suppressors. For those who take their target shooting more seriously, the new Mosquito Sport features a longer sight radius and is fitted with an extended barrel and barrel weight.
